

The V series bevel gearboxes offer an extensive range of thrust and torque outputs for multi-turn applications such as gate and globe valves, and slide gates. Applications for weatherproof or temporary submersion (IP67) service can be accommodated. Optional spur gear attachments reduce the input torque required, resulting in lower handwheel rim pull for opening and closing operations.

The V series ductile iron housing provides strength and durability. The drive sleeve, bevel pinion shaft, and spur gear reduction shafts are roller bearing-supported, delivering high mechanical advantage and long life. Excellent sealing of mating surfaces provides reliable environmental protection. Ambient temperatures to -35°C are achieved with the standard lubricant.

Features and Benefits

- Weatherproof and temporary submersion construction (IP67)
- Maintenance-free
- Input flanges machined in accordance with MSS SP-102, with keyed input shaft
- Mounting flanges are MSS as standard, with ISO available as an option
- Splined, bronze alloy stem nut is removable from the drive sleeve for thread machining
- High strength bevel pinion and ring gear
- Roller bearing supported for high mechanical advantage
- Ductile iron enclosure

The V and V_H series bevel gearboxes, when motorized by MX, L120, or SMB actuators, provide effective and reliable solutions for multi-turn valve, sluice gate, and slide gate applications.

- Optional V_H design available for high thrust and torque applications with thrust output to 2.585 million lbs (11 500 kN), and torque output to 104,734 ft. lbs (142 000 kN)
- -35°C to 90°C (-31°F to 194°F) temperature range for continuous operation, with -50°C (-58°F) available

Note: V_H gearboxes are available with single reduction and double reduction spur gear attachments.

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can (and often does) provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Operation Maintenance (IOM) instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
