Reliability services

Experience In Motion

Services and solutions

Description

Typically, 90% of the total Life Cycle Cost (LCC) of a flow management system is accumulated after the equipment is installed. In today's economy, process plants are focusing on lowering total cost of ownership, but limited budgets equate to improvements being delayed while lean operation exercises are implemented.

Most plant challenges are related to persistent bad acting equipment in addition to operational issues such as high energy costs and availability losses. Finding root causes of these issues and formulating a precise action plan to realize the available cost savings can be a difficult process.

Reliability Services are packaged standard solutions that drive sustainable reliability of a plant's rotating equipment. A key value of Reliability Services is our dedication as a reliability partner for the client. Flowserve Pump Systems Assessment Professionals (PSAPs) assess the current condition of a client's equipment, reliability program and maintenance personnel knowledge. After the gaps of each are identified, we train personnel and implement necessary improvements for instant reliability gains and reduction in overall LCC.

Flowserve condition-based monitoring methodology is founded on reliability-centered maintenance (RCM), failure mode and effects analysis (FMEA) fundamentals, and are managed by experienced reliability and rotating equipment engineers.

Objectives

- Complete a comprehensive assessment of equipment performance by gathering essential sensor data to evaluate where the equipment is operating compared to the design point
- Perform a sustainability assessment of engineering, maintenance and operations along with reliability metrics benchmarking to evaluate the client's current condition
- Create a tailored training plan that addresses resource competencies which require development
- Review the recommended equipment and system improvements and upgrades; launch strategic implementation plan

Value

Improve safety

By ensuring industry best practices are in place, plants use a 'Safety First' approach committed to operating in a responsible manner that prevents accidents and protects the safety of employees, customers, the public and the environment.

Improve efficiency of operations

By evaluating the condition and performance of rotating equipment and establishing clearly defined operational control limits consistent with API 691, plant equipment runs at its best efficiency point (BEP), which drives overall efficiency of operations.

Reduce downtime and improve reliability

By ensuring proper PM/PdM practices are in place, plant equipment availability is improved, which in turn leads to increased productivity and profits.

Lower cost of ownership

By improving equipment reliability, maintenance costs decrease and equipment life span increases, which results in a reduced total cost of ownership.

Five-step assessment process

Reliability service offerings

Reliability Services consists of three pre-designed offerings with increasing scope that deliver the level of reliability improvement customers desire for their specific application.

The chart below showcases the reliability service actions that are included in each offering for easy reference to determine which solution is right for your needs.

Reliability Service Actions	Audit	Assessment	Program
Equipment Database Data Collection	✓	✓	✓
Field Walk-down of Asset(s)	✓	✓	✓
Progress Review Meeting	✓	✓	✓
Visual Observation Recommendations	✓	✓	✓
Vibration Data Collection		✓	✓
Flow Measurements		✓	✓
Failure History Review		✓	✓
Operational FMEA		✓	✓
Define Operating Control Limits (Operating Road Map)		✓	✓
Pump Performance Test		✓	✓
Energy/Reliability Review		✓	✓
Preventative and Predictive Maintenance Program Reviews		✓	✓
Gap Strategy Review (per Scope)		✓	✓
Final Recommendations Report With Applicable ROI		✓	✓
Sustainability Program and Training Recommendations			✓
Data Management (ERP/CMMS) Extraction and Flowstar Upload			✓
Industry Reliability Metrics Benchmarking Through Flowstar.net			✓
Implementation Plan Workshop			✓
	Transactional	Transactional	Contractual (3 – 5 yrs)

Flowserve performs Reliability Services for the following industries and on the applicable machinery types below, regardless of the OEM:

Industries served: Chemical Processing; Oil & Gas; Power Generation; Refining; Mining

Machinery types: API 610 Pumps; API 611 General Purpose Steam Turbines; API 612 Special Purpose Steam Turbines; API 614 Lubrication Shaft Sealing and Controlled Oil Systems; API 675 Positive Displacement – Controlled Volume Pumps; API 676 Positive Displacement – Rotary Pumps; API 677 General Purpose Couplings; API 682 Shaft Sealing Systems for Centrifugal and Rotary Pumps; API 685 Sealless Pumps

Reliability partnership

As your reliability partner, Flowserve creates a comprehensive recommendation plan and execution strategy to achieve sustainable reliability and optimal plant performance. Below is a list of commitments Flowserve provides in the Reliability Program for continued improvement throughout the life of the multi-year contract.

- Review equipment condition, system performance and failure history
 - Perform visual audit, noting corrective actions to be taken on equipment and system auxiliaries
 - Collect incomplete equipment data
 - Perform equipment performance testing
- Perform an operational FMEA on targeted equipment
- Review PM/PdM programs
- Supply a detailed report, including:
 - Opportunities to improve equipment condition and performance
 - Gaps in existing PM/PdM programs
 - Solutions for chronically problematic equipment and systems using Return on Investment (ROI) projections
- Data management (ERP/CMMS) extraction
 - Flowstar equipment and repair history upload
 - Reliability reporting through Flowstar.net
- Sustainability program and training recommendations
 - Recommend specific training courses to support sustainability development utilizing Flowserve Learning Resource Centers (on-site custom courses available)
- Implementation workshop
 - Review equipment upgrade and corrective action recommendations
 - Deliver strategic plan for implementation of recommendations

Flowserve Corporation
 5215 North O'Connor Blvd.
 Suite 2300
 Irving, Texas 75039-5421 USA
 Telephone: +1 937 890 5839

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
